## Mixer/Composter

(specializing in mixing organic fertilizer & additive bacteria  
for high speed fermentation process. )

The newest mixer/composter specializes in mixing organic fertilizer & additive bacteria. It is able to put in kitchen wastes, vegetables, dead chickens, chicken excrements and so on for completely mixing, also to put in bacteria for high-speed fermentation. The specifications are easy installation and operation, time and labor-power saving. Moreover, the machine body is all made of stainless steel SUS304 for easy cleansing.

## Advantage of Composting

	<b>Fast composting</b>	<b>Natural composting</b>
Fermentation Time	Short (24hrs)	Long (More than 4 weeks)
Working Space	Uses space only according to size of machine	Require a large space to spread the composting pile
Smell	Odourless	Dirty with strong odours left by raw manure
Quality	Controlled and consistent	Dependent on weather and inconsistent
Dead Farm Animals & Discarded Unprocessed Matter	Can be easily composted	May have difficulty in composting dead farm animals
Ability to Eliminate Bacteria	Strong and able to eliminate harmful bacteria	Not able to eliminate all harmful bacteria

# The Process

- \* Convert animal & plant wastes into pure organic fertilizer in 24 hours.
- \* Organic fertilizer produced has high NPK value.
- \* This specially formulated enzyme is able to stand high temperature of 120C.
- \* The enzyme mix can reduce the raw manure odour significantly.
